Web Technologies	:	Angular, HTML, CSS, typescript and JavaScript
Programming Languages	:	Core Java
Web Server	:	Tomcat
IDE	:	Visual Studio, Eclipse and Postman
Operating Systems	:	Windows, UNIX and Linux
Version Control	:	Mars and Git
Methodologies	:	Waterfall Model, Agile

PROJECTS:

Project #1 – MyStoreHealth for Homedepot Client (Angular Developer)

This Project is a ticketing system which means we are handling tickets(issues) that the user faces. Here the issues like if the user faces any issues with any devices which are used in the store (scan gun, printer, Store PC, First Phone, Tool Rental. etc) then he can raise the ticket form Related Ticket Creation Forms (ESVS, First Phone and Tool Rental) and these tickets are stored in Service Now and the Help desk Team or Store Team can repair or replace the devices. Also, we are providing some solutions the user can search the solution and solve the issue if not he can create the ticket. If the application have any issues we are intimation it as a notification if the user effected with those issues, and we are tracking the impacted users and issues and make that issue as a priority one. We are providing list of devices in a particular store. Also, we are providing what are the new updated in Store Health application and user-provided feedback (form Usable Feedback) and Network health of the store.

Responsibilities:

- Developed the application using Angular framework.
- Design the frontend using Angular Material.
- As a UI Developer, Analysing the assigned task and completing the task in given deadline.
- Implemented different Actions for Application Flow.
- Implementing and modifying the existing functionality based on the requirements.
- Writing the specs for the testing and resolving the issues that are raised.
- Attending the sprint meeting for every 2 weeks.
- Attending the daily scrum calls.
- Worked on bug fixing and enhancements.

Environment: Angular10, TypeScript, ,HTML,Css,github

Project #2 – ServicesBay Portal (Angular Developer)

ServicesBay is Web Application which is used for Customer Activities, Vendor Activities, Customer Support and Recruitment and Staffing. I used Angular 8 for UI portal and I have done different modules like Account Management, Project and Task Management, Budget Management, Time sheets and Invoice management.

Responsibilities

- Participate in daily stand-up calls for backlog updates
- Work with Back-End Developers to integrate REST services to the Angular application
- Developed the application using Angular
- Design the front-end using Client UX standards
- Worked on bug fixing and enhancements
- Creating custom, general use modules and components which extend the elements and module
- Involved in implementation of self-contained, reusable components
- Responsible for giving support to the team when they need help

Environment: Angular, Spring Boot, Angular Material, Bootstrap, Prime Ng and Git

Project #3 – Elektra (Angular Developer)

Elektra is a data migration and movement product that enables secure and scalable transfer of data between SAP(ERP) and other storage targets like Azure, Snowflake, Oracle, SQL Server, and flat files. It also provides a web-based interface to create, manage and monitor data flow jobs along with role-based user access management.

Responsibilities

- Participate in daily stand-up calls for backlog updates
- Work with functional teams to understand requirements and design serverless functions
- Developed Client-Side Validation using JavaScript and Angular
- Worked on bug fixes and enhancements
- Deployment of the application to Tomcat
- Managed source repository using Gitlab

Environment: Angular8, HTML, CSS, typescript, Git.
